

Compliance

In the security world the evaluation of encryption systems is based on scientifically approved methods to analyze and validate encryption algorithms.

Zorg uses only government approved security algorithms that meet FIPS-140 validation requirements as described in NIST FIPS PUB 140-2 Annex A and NIST FIPS PUB 140-2 Annex D.

ZRTP's Zorg specification is compliant with the following Government security standards:

- NSA Suite B Cryptography
- NIST SP 800-56A
- NIST SP 800-38A
- FIPS PUB 197
- FIPS PUB 180-2
- FIPS PUB 198

More detailed and explained certification and compliance items will be provided in the future.
