

5. Logs

There are several kinds of log on PrivateServer and each one is suitable to monitor a different aspect of the service.

1. **EVENTS**
 - a. Auditing
 - b. Web Sessions
 - c. Call Detail Record
 - d. Sip Sessions
 - e. Messages
 - f. Install messages
 - g. Activation messages
2. **MONITORING**
 - a. Registered Accounts
 - b. Sip Trunk
 - c. Message Queue
3. **SECURITY**
 - a. Data Retention
 - b. Archived Data

Each family of logs owns its page that explains the details, but as a general introduction we can state that the **Static Logs** are the ones written after an event took place. The **Live Logs** are about the living status of accounts and trunks. The **Log's Retention** is a policy definition, more a setup than a log itself even if it's possible to download the logged data as well.

5.1 EVENTS
