

# [BES] Push PrivateGSM from BES

## How to push PrivateGSM application to BES 5

To push an application through a BES 5 server the application must be delivered like if it has to be installed with Desktop Manager. In order to deploy blackberry applications, two files are required:

- .COD file, the actual binary application
- .ALX file, metadata informations about application

The exact procedure depends on BES version is explained at RIM official [KB0374](#) knowledge base
