

What's new

Here are descriptions of the more relevant changes in EVSS 21.0

Enterprise Voice Security Suite

Group Chat

It is possible to create groups to exchange messages with multiple contacts at the same time. The messages are always encrypted end-to-end.

The creator of the group becomes the administrator who can add new users or get users out of the group. Members of the group may leave the group on their own.

Apple CallKit

The Privatewave client for iOS is now integrated with Apple libraries to manage incoming calls. You no longer need to unlock your phone via Touchid or Faceid but simply swipe it like a normal call.

Six digit PIN

To increase security the PIN to unlock the application is now 6 digits long.

Message Reply

It is possible to reply to a message by quoting the text of the message to which it responds.

Geo-location sharing

You can share your location as a secure message attachment

Remote deletion of Secure Messages

It is possible to delete a message already sent in the chat. Other users will no longer see the content of the message removed but a "Message removed" placeholder.

iOS and Android Dark Mode

Support to new dark theme on iOS and Android 10.
