PrivateGSM BlackBerry 14.1.3843

Release Notes

Current release introduces **Call Roaming** support for all Editions, meaning that **ongoing calls** can **survive** to **network switches** and network **flops**: one secure call could continue either if you switch from wifi and to mobile data connections. Also network changes in data mobile nets are now supported. Network failures up to 17 seconds are managed so that **calls can be retrieved if possible**.

PrivateGSM - All editions - Version 14.1.3843

Improvements

- [PGBB-1064] - Raised network failure timeout to 17 seconds (aka RTP timeout)
- [PGBB-1037] - Don't hangup calls if experiencing network change (2G <-> 3G)
- [PGBB-1038] - During secure call, do not hangup on partially broken network (TCP connection broken but UDP still valid)
- [PGBB-1040] - During call, tolerate data stream interruption up to "network failure timeout" setting (aka RTP timeout)
- [PGBB-1041] - During call, do not hangup due to network switch

Fixed Bugs

- [PGBB-1032] - A call performed in poor network conditions is logged with timestamp "1st jan 1970"
