4.0 Logs

There are several kinds of log on PrivateServer and each one is suitable to monitor a different aspect of the service.

1. **Logging**
    a. Auditing
    b. Web Sessions
    c. Call Detail Record
    d. Sip Sessions
    e. Messages
    f. Install messages
    g. Activation messages
2. **Real Time Management**
    a. Registered Accounts
    b. Sip Trunk
    c. Message Queue
3. **Log's Retention**
    a. Data Retention
    b. Archived Data

Each family of logs owns its page that explains the details, but as a general introduction we can state that the **Static Logs** are the ones written after an event took place. The **Live Logs** are about the living status of accounts and trunks. The **Log's Retention** is a policy definition, more a setup than a log itself even if it's possible to download the logged data as well.

- 4.0.1 Logging
- 4.0.2 Real-Time management
- 4.0.3 Privacy Settings and System Logs
