14.2.2655

Release Notes

Present release of PrivateWave for iPhone offers an important new feature: **PIN protection**. It's now possible to setup one personal PIN to prevent others access your secure call engine and messages. This PIN is **specific of PrivateWave** and thus is **not related to any OS PIN**.

We also **raised performances** of Secure Message management and of every list in "Recent" tab.

Along with all the above stuff there are also some minor bug fixes. Please read following detailed notes.

PrivateWave - All Editions - Version 14.2.2655

Improvements

- [IOS-998] - Application is protected by an application PIN
- [IOS-994] - Improve performance of setting the number of missed calls/new messages
- [IOS-995] - Improve performance of messaging view

Fixed bugs

- [IOS-991] - Internal Log at DEBUG level were not written
- [IOS-1006] - Silent mode (ergo silent button activated) did not affect dialpad sounds
- [IOS-1007] - Multiple attempt for registration led to failure for overlapping
- [IOS-958] - Reconnection via SIP/TLS was prevented by unmanaged registration timeout
- [IOS-960] - Performing connection tests more than one time led to test fail.
- [IOS-1039] - Neither "cancel" or "send" buttons are shown in email interface, when sending logs
