

# 14.3.2926

## Release Notes

### broken legacy

Due to security protocol upgrade this client version no longer supports 14.1 PrivateServer series

## PrivateGSM - All editions - Version 14.3.2926

Present version offers a **new User Interface** designed to improve usability and customer's experience. Along with the graphical renewal we introduced **Persistence of secure messages** and **PIN under duress** features.

We also fixed some minor bugs.

### New Features

- [IOS-1057] - New User Interface
- [IOS-1088] - Persistence of secure messages
- [IOS-1139] - PIN "under duress" feature

### Improvements

- [IOS-1070] - Unified phone number picker UI
- [IOS-1126] - Disabled SSLv3
- [IOS-1117] - Upgraded to OpenSSL 1.0.1j
- [IOS-1066] - Changed default value Max PIN retries from 3 to 5

### Bugs

- [IOS-1042] - "cancel" or "send" button were not shown in email interface when sending logs
- [IOS-1043] - Network switch during secure calls could lead to unexpected application quit, after hangup
- [IOS-1092] - Fixed License check when starting up in background on a PIN-locked device
- [IOS-1096] - When starting in background, application got stuck for almost ten minutes before the SIP engine started up
- [IOS-1101] - High resolution DTMF keypad image is now used.
- [IOS-1129] - Manually Configured PrivateGSM that receives secure messages can crash
- [IOS-1134] - Fixed issue in sending persistent outgoing messages in case of network gaps
- [IOS-1145] - Fixed stability issue when accessing AddressBook
- [IOS-1138] - Fixed Scrolling issues during Secure Messages
