

16.0.0.5541

Release Notes

The main change of this version is support to messaging.

PrivateWave - All editions - Version 16.0.0.5541

New Features

- [BBIO-140] - Added messaging support
- [BBIO-145] - Call/message history size is user-configurable
- [BBIO-146] - Read notifications is user-configurable

Improvements

- [BBIO-21] - Improved performances in loading contacts
- [BBIO-120] - Delete single entry missing from recent after clicking on info (i)
- [BBIO-122] - Support AppURL for client activation
- [BBIO-160] - Support multiple IP addresses per hostname
- [BBIO-165] - No number of missed call is shown on recent tab, when missed calls are received
- [BBIO-166] - No number of messages is shown on messages tab, when secure messages are received
- [BBIO-167] - Choosing a contact from contacts tab it opens contact detail, doing back row is still highlighted in black thus it's not possible to read contact name.

Fixed Bugs

- [BBIO-73] - Manage core dumps
- [BBIO-148] - composer with virtual keyboard on Blackberry leap is acting strangely
- [BBIO-155] - Blackberry 10 on Leap device with virtual keyboard, composer is slow
- [BBIO-163] - If the UI is closed and reopened, it may lose its events connection with the service
- [BBIO-175] - Call history summary doesn't highlight contacts with missed calls, nor show how many missed calls were received
- [BBIO-176] - The UI never acknowledges missed calls
