

16.0.3850

Release Notes

PrivateWave - All editions - Version

New Features

- [IOS-1201] - Secure messages are protected with end-to-end encryption

Improvements

- [IOS-1408] - Removed registration and connection error alerts while client is in background
- [IOS-1417] - Refresh license when license screen is shown and license is expired

Fixed Bugs

- [IOS-1384] - "User unavailable" announcement is played twice on device, while calling through SIP trunk
- [IOS-1404] - Information Leak using duress code on iPhone messaging e2e
- [IOS-1418] - Transaction timeouts in INVITE dialogs don't cause application to reconnect
- [IOS-1435] - Presence does not work properly when in clustered infrastructure if one node left abruptly
- [IOS-1440] - Self registration may get stuck in the "Activating" screen
- [IOS-1445] - Incoming messages are saved to the history more than once if they were received while the application was PIN-locked, and if the sender revokes the key before the application is unlocked

Known Issues

- [IOS-1452] - Bluetooth is not support on incoming calls with some headsets/handsfree kits
