Secure calling

Call modes

PrivateWave lets you to:

1. make secure calls to phone numbers and contacts using the PrivateWave +801 prefix **(not available on iOS)**. In this case, you do not need to manually open the main menu of PrivateWave if the application is in background.
2. make secure calls to phone numbers and contacts without entering the PrivateWave prefix directly from menu of the application.

Secure Calling from PrivateWave application

Dialing a secure call

You can make a secure call from the PrivateWave menu by simply dialling the number complete with international country code (i.e.: +44 for UK) and pressing the dial button.

> **Suggestion**
>
> If you intend to frequently make secure calls to the same number, add it to your "Favourites" contact list

To dial a secure call using the PrivateWave menu:

Figure 1. iPhone

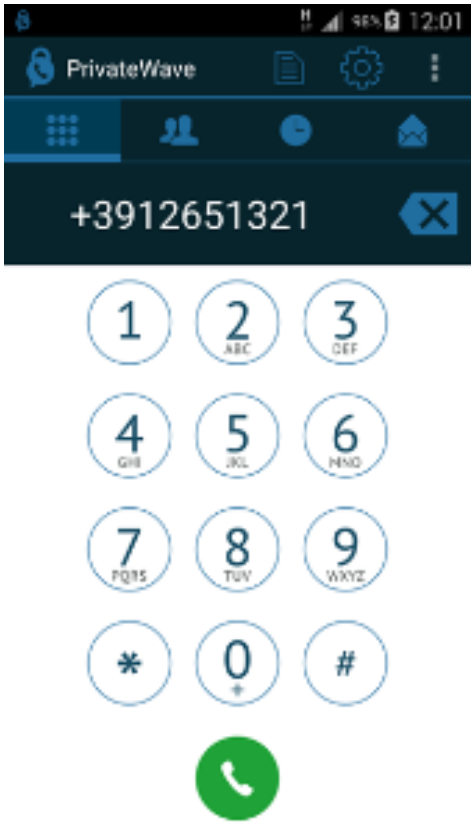

Figure 2. Android

Secure Calling from Contacts Lists in PrivateWave

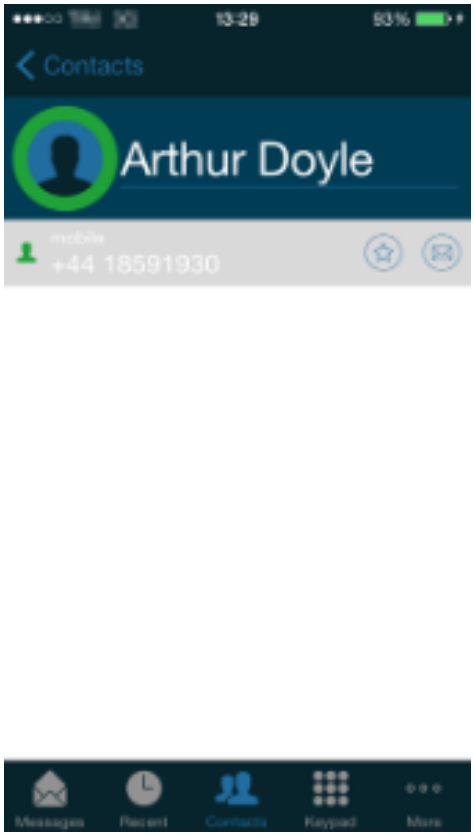
You can make secure calls from PrivateWave by simply selecting a contact in any contact list.

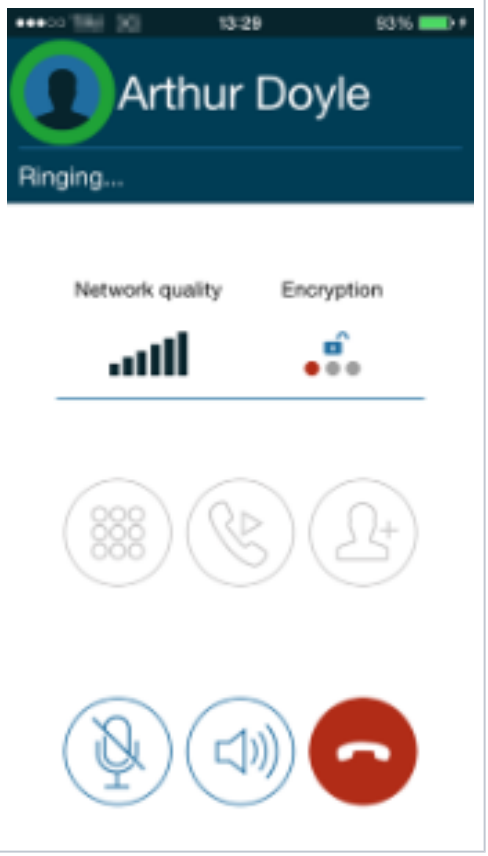
Suggestion

If you intend to frequently make secure calls to the same number, add it to your phone book with the PrivateWave prefix or add it to the Favorites list

Please read specific chapter about managing Contact Lists in PrivateWave

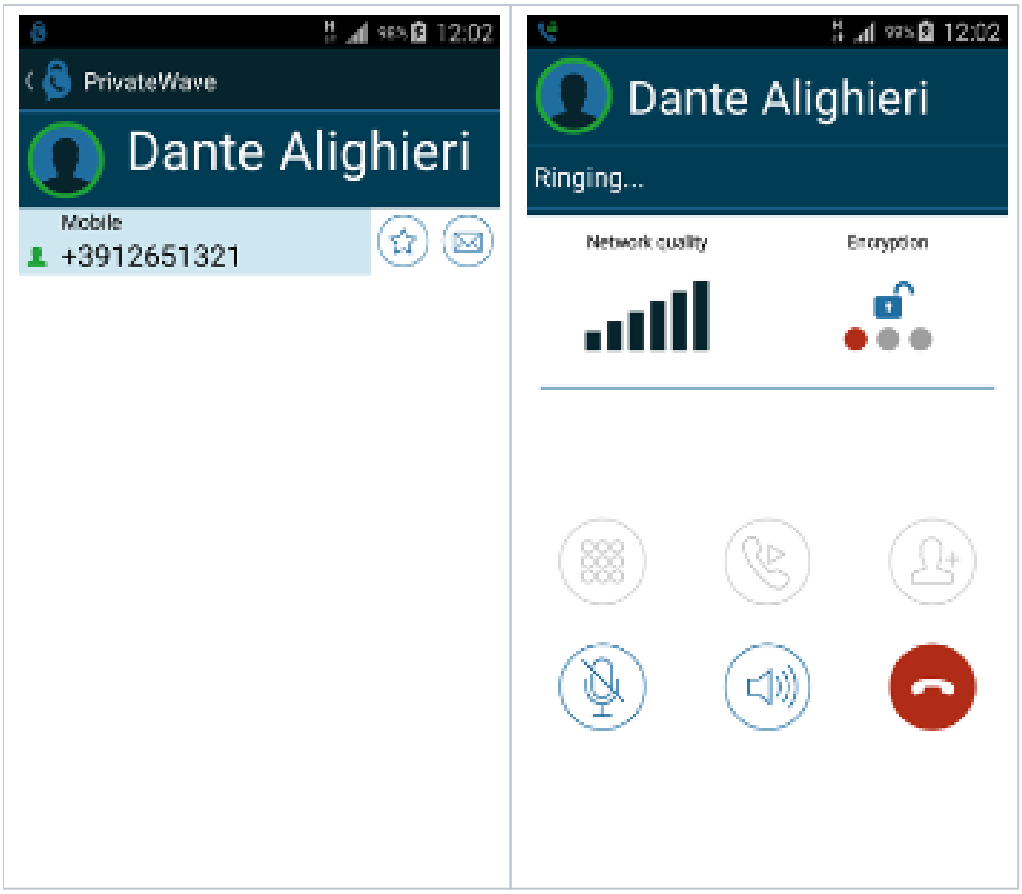
iPhone

Step 1	Step 2
Select your callee by pushing on its name	Secure Call begins
	




Android

Step 1	Step 2
Select your callee by pushing on its name	Secure Call begins



Native call interaction

If during a secure call one of the two devices receives a native GSM / 3G / 4G call, the VOIP call will be put on hold and the subscribers will be informed by pop-up.
