

Advanced telephony features

In the following paragraphs some advanced telephony features are described. These features are available in PrivateGSM Enterprise Edition with PrivateServer while using end-to-site encryption security model.

Transfer secure call

During a secure call you can transfer the call to another contact.

- iPhone: tap in the middle of screen > tap on **Transfer** icon
- Android: press menu key > select **Transfer Call**
- Blackberry: press menu key > select **Transfer Call**

You can transfer the call to a contact in your address-book or you can input a number to transfer the call to.

Three way secure call

During a secure call you can add a third participant to the call.

- iPhone: tap in the middle of screen > tap on **Add** icon
- Android: press menu key > select **Add Participant** menu item
- Blackberry: press menu key > select **Add Participant** menu item

You can add a new participant to the current secure call by choosing a contact from your address book or inserting a number manually.

Secure Conference Room

Conference room is a feature provided by the PrivateServer secure PBX. You should dial # followed by the conference room number and, if a PIN is required during the call:

- iPhone: tap in the middle of screen > tap on DTMF icon and digit the PIN number followed by #
- Android: press menu key > select Send DTMF menu item and digit the PIN number followed by #
- Blackberry: press menu key > select Send DTMF menu item and digit the PIN number followed by #
