

Automatic activation

Activation Message

PrivateWave can be automatically activated by Service Operator/Administrator by just delivering a configuration link.

This link can be delivered by any means, but it has to be used directly on user's device where previously PrivateWave have been installed.

 An **installation link** containing PrivateWave software download link can be sent as well, please check [Installation](#)

Built in delivery method in PrivateServer are:

- **Text Message**
- **E-Mail**

Once your device received configuration link by one of the above ways or by another one (e.g. Instant Messaging or Chat Applications) you (as User) can click on the link provided. Your device's OS will try to open it with your favourite browser.

 Under some conditions you can be asked to choose which browsing application has to deal with Automatic Activation link. Usually default choice is safe to select.

Once link is opened, browser will ask you if to open it with PrivateWave . Answer positive and **PrivateWave will be launched automatically**, then the initial wizard will help you to configure and test the provisioned configuration as shown below.

 With a provisioned configuration, the application settings are not editable by the user. The user can see only a restricted set of the application settings. The application settings are fully editable only if the SIP account is manually configured during the initial activation wizard.

 Once provisioning link from a specific PrivateServer is used, for security reasons PrivateWave ties itself to that server and will accept further provisioning links from that server only. You should reset PrivateWave to factory defaults (from the Settings view) or reinstall the application (if Settings are set as Read Only) to be able to accept links from other servers.

Blackberry

Step 1	Step 2
Click on the provisioning link	Confirm PrivateWave activation
	

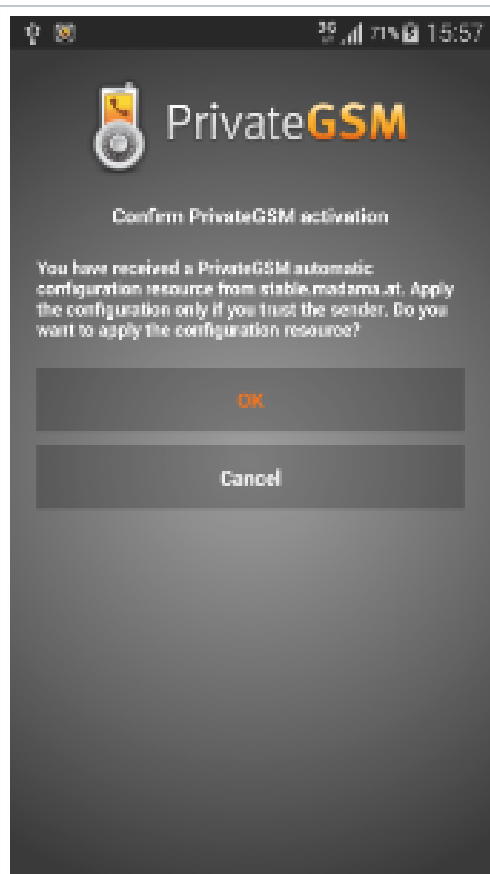

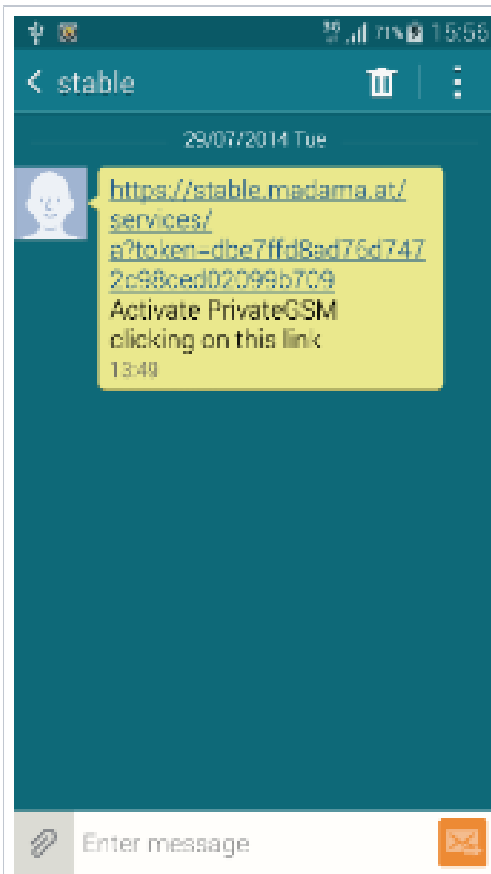

iPhone

Step 1	Step 2	Step 3
--------	--------	--------

Click the provisioning link	Select "Open in PrivateWave "	Confirm PrivateWave activation
 A screenshot of an iPhone's Messages app. The contact is 'stable'. A message received 'oggi 13:21' contains a blue hyperlink: 'https://stable.madama.at/services/a?token=19b3dcf7ff5cdd303b0a86e05e9a541d'. Below the link, it says 'Activate PrivateGSM clicking on this link'. The bottom of the screen shows the 'Message' input field and an 'Envoyer' button.	 A screenshot of an iPhone's Safari browser. The address bar shows 'stable.madama.at'. Below the address bar, there are two links: 'Ouvrir dans...' and 'Ouvrir dans - PGSM Ent »'. In the center, there is a download icon (a square with a magnifying glass) and the text '83 octets' below it. The bottom of the screen shows standard Safari navigation icons.	 A screenshot of an iPhone's PrivateGSM activation confirmation dialog. The title is 'Confirm PrivateGSM activation'. The text inside says: 'You have received a PrivateGSM automatic configuration resource from stable.madama.at. Apply the configuration only if you trust the sender. Do you want to apply the configuration resource?'. At the bottom of the dialog are two buttons: 'Cancel' and 'OK'. The background shows a portion of the iPhone's home screen with a green lock icon.
