

# Making a secure call with PrivateGSM

## Call modes

PrivateGSM lets you to:

- make secure calls to phone numbers and contacts using the PrivateGSM +801 prefix (**not available on iOS**). In this case, you do not need to manually open the main menu of PrivateGSM if the application is in background.
- make secure calls to phone numbers and contacts without entering the PrivateGSM prefix directly from menu of the application.

## Secure prefix number (Android and BlackBerry)

Calls with PrivateGSM are simply identified by the "+801" prefix in front of the number to be dialed including the international prefix without zeros. For example:

"**+801 44 333 1234567**"

<b>+801</b>	PrivateGSM prefix, including '+'
<b>44</b>	International country code for UK without zeros
<b>333 1234567</b>	Phone number

### Note

For quick dialing we recommend you save numbers with the +801 prefix as "secure" contacts in your phone book.

## Dial secure call with +801 prefix (not available on iOS)

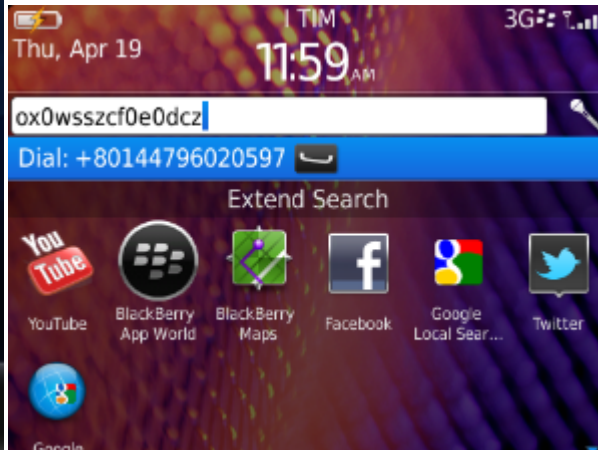

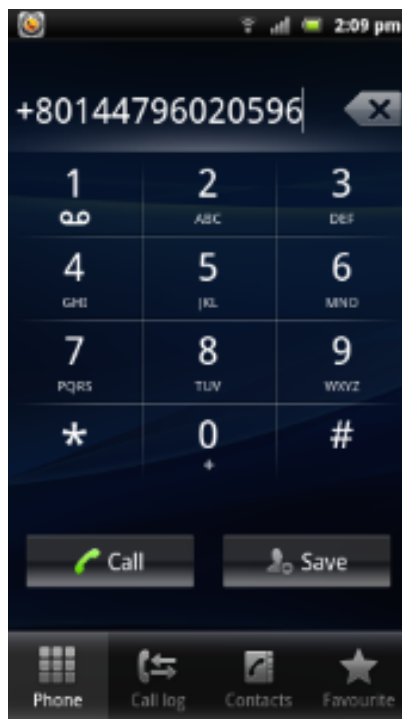

Dialing a call with secure prefix +801 is not available on iPhone/iPad due to platform constraints.

Making secure calls with PrivateGSM is very easy. Dialing is as simple as prefixing your phone numbers with +801 as with international calls. With secure prefix you can make calls as you do with normal calls on your phone: insert phone number, select a contact from your address book or even from recent calls logs. Phone numbers prefixed with secure prefix +801 are detected by PrivateGSM which automatically starts a secure call.

## Dialing a secure call

You can dial a secure call by entering the "+801" prefix before the number to be dialed, **including the international country code without zeros**.

**To dial a secure call complete with prefix:**

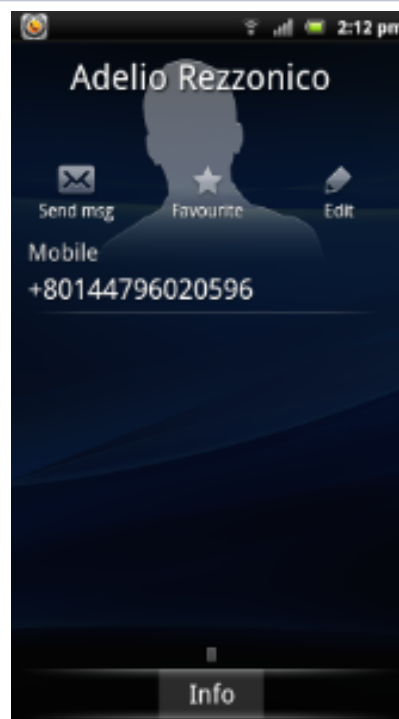

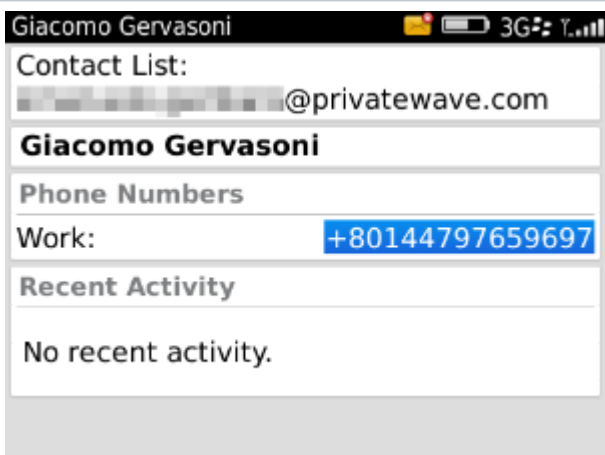

1. Enter the "+801" prefix before the number and press the dial button

## Dialing a secure call from contacts

You can call a number previously saved in the phone book with the PrivateGSM prefix (see chapter 7.2 "Secure prefix number").

To make a secure call to a contact saved in your address book with the PrivateGSM prefix:

1. BlackBerry: select a "secure" contact and press the SEND key

2. Android : select a "secure" contact and start a call

# Dial secure call from PrivateGSM application

## Dialing a secure call

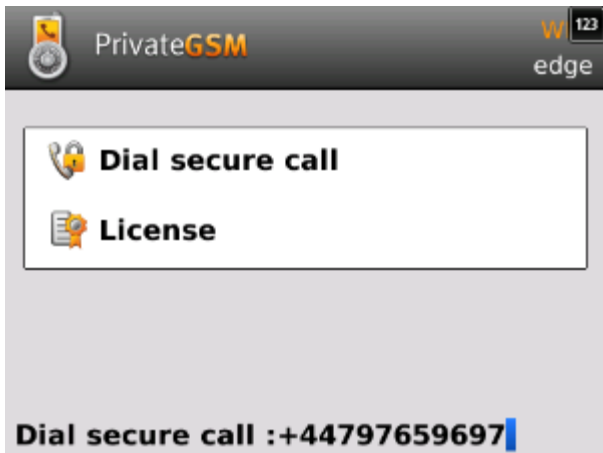

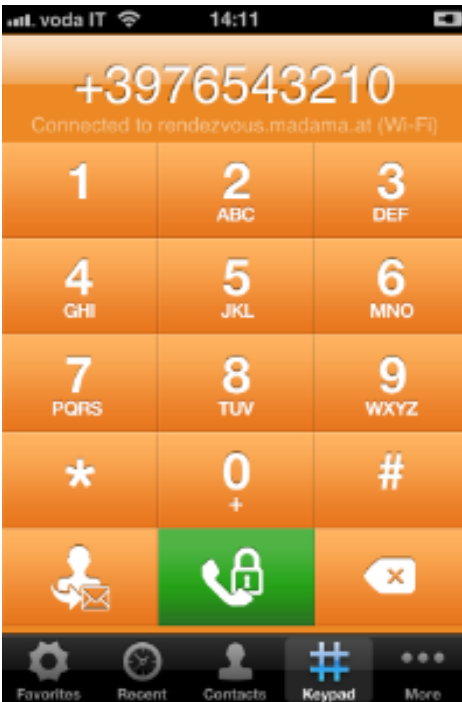

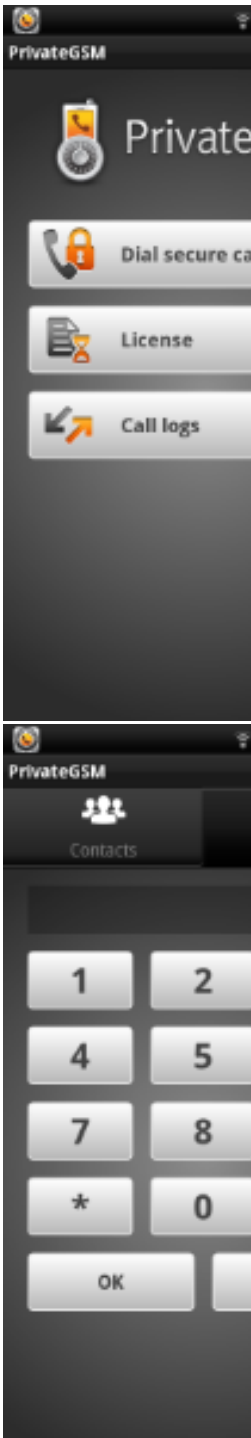

You can make a secure call from the PrivateGSM menu by simply entering the number complete with international country code (i.e.: +44 for UK) and pressing the dial button.

### Suggestion

If you intend to frequently make secure calls to the same number, add it to your phone book with the PrivateGSM prefix (see "Secure prefix number" chapter).

**To dial a secure call using the PrivateGSM menu:**

 <p><b>Dial secure call</b></p> <p><b>License</b></p> <p><b>Dial secure call :+44797659697</b></p>	 <p><b>+3976543210</b></p> <p>Connected to rendezvous.madama.at (Wi-Fi)</p> <p>1 2 3 4 5 6 7 8 9 * 0 #</p> <p>Favorites Recent Contacts Keypad More</p>	 <p><b>PrivateGSM</b></p> <p><b>Dial secure call</b></p> <p><b>License</b></p> <p><b>Call logs</b></p> <p><b>Contacts</b></p> <p>1 2 4 5 7 8 * 0</p> <p>OK</p>
<p><b>1. BlackBerry: digit phone number and click on green SEND button</b></p>	<p><b>2. iPhone: digit phone number and click on green DIAL button</b></p>	<p><b>3. Android: select "Dial sec digit the phone number in the dialpad</b></p>

## Dialing a secure call from contacts

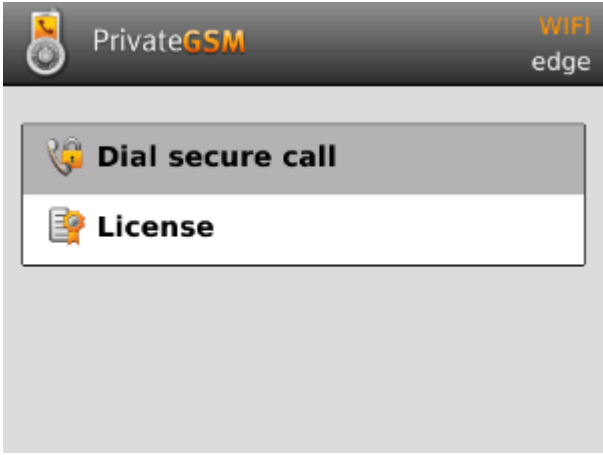

PrivateGSM lets you to choose a contact from your phone address book, so you can make secure calls from PrivateGSM menu by simply selecting a contact. PrivateGSM sort contacts in the same way as native address book does. On iPhone you can change contacts ordering by opening **System Settings > PrivateGSM > Application > Contacts Sort Order**

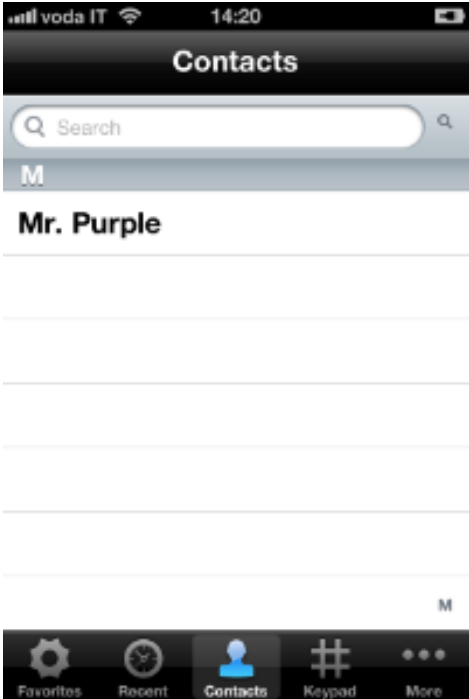

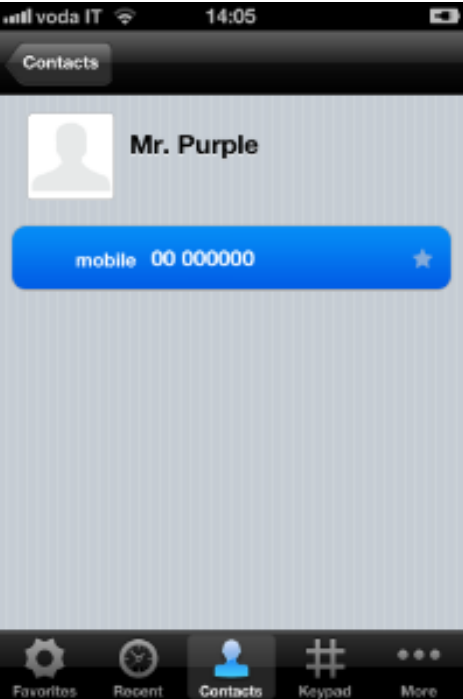

### Suggestion

If you intend to frequently make secure calls to the same number, add it to your phone book with the PrivateGSM prefix

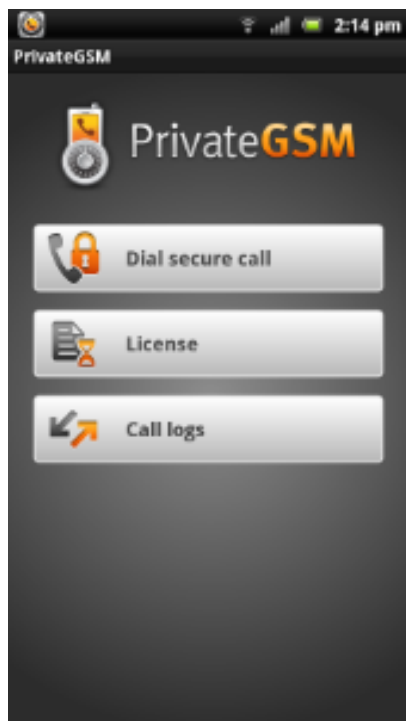

To dial a secure call to a contact using the PrivateGSM menu on BlackBerry:

 The screenshot shows the BlackBerry PrivateGSM application interface. At the top, there's a status bar with the PrivateGSM logo and 'WIFI edge' signal. Below it, a menu is displayed with two options: 'Dial secure call' (with a lock icon) and 'License' (with a key icon). <div>1. Select Dial secure call</div>		 The screenshot shows the 'Select contact' screen within the PrivateGSM application. It features a search bar at the top. Below the search bar, a list of contacts is displayed: 'Adelio Rezzonico', 'Giacomo Gervasoni', 'Ingrid Brunner', 'Jean Paul Blanc', and 'Roger Cabalzar'. <div>2. Select contact and press SEND key</div>
