PrivateGSM Professional Activation Wizard

Before you can start using PrivateGSM Professional you have to configure it by choosing *Automatic* or *Manual* configuration mode. Choosing *Automatic* mode PrivateGSM automatically creates an account on PrivateWave servers and bind your mobile phone number to it, so that your contacts can dial you using your mobile number instead of using a new line extension. If you choose *Manual* mode you will have to provide the SIP server host name and account credentials just like in the case of Enterprise edition.
In order to activate Automatic mode PrivateGSM sends an SMS to a PrivateWave UK's number, so be sure that your SIM is enabled to send international SMS. Since this feature is subject to additional costs related to sending an SMS, PrivateGSM asks to the user to confirm the action before proceeding with it.

BlackBerry

1. Start Activation Wizard	**2. Select Automatic configuration**
3. Start connection test	**4. Connection test progress**

PrivateGSM	**PrivateGSM**
Connection tester	**Automatic configuration**
The network is now correctly configured.	This version allows secure calls between mobile phones using the ZRTP protocol. PrivateGSM must be installed on both phones. Continuing the procedure an international SMS will be sent for setting up an account on PrivateWave servers.
• Transport type: DIRECT TCP	
• Apn: ibox.tim.it	
WARNING: Check with your mobile carrier the Internet connection rates concerning these settings, to avoid extra or unexpected costs. By closing this procedure, the settings will not be saved.
