

PrivateGSM Android 11.2.3071

Latest update

Unknown macro: 'page-info'

Release Notes

Main features of this intermediate release for Android are the extended support for small devices with a low resolution and some tuning of the User Interface that now is more stable and better responsive to actual telephone events, as our customers asked.

Also some minor bug fixes were implemented and a better licence management as well. All the features aim to perform a better user experience and to produce a stabler application.

PrivateGSM - All editions - Version 11.2.3071

New Features

- N/A

Improvements

- [PGDR-457] - Increased the Font size in Contact List
- [PGDR-458] - Now the User Interface works fine even for LDPI device (240x320 resolution)

Fixed Bugs

- [PGDR-454] - Remove the "DTMF feedback sound" from the Application settings
- [PGDR-455] - Wrong error text shown if a connection error occurs
- [PGDR-459] - During a Call on 3G/2G network, if the phone switches to a Wi-Fi network, then the call drops but PGSM remains in "InCall" screen
- [PGDR-471] - PrivateGSM occasionally crashes if the callee refuses the call
- [PGDR-475] - A connection error shows a warning dialog even if the app is in background
- Minor bug fixes

Known Issues

N/A
