

# PrivateGSM iPhone 11.3.2010

Latest update

Unknown macro: 'page-info'

## Release Notes

This release is mainly a bug fix one. A critical error was found in the **connection timings** and it could lead to large unnoticed disconnections of the client. Also the **log corruption** has been amended.

PrivateGSM - All editions - Version 11.3.2010

## Fixed Bugs

- [IOS-710] / [IOS-739] / [IOS-740] - Fixed a wrong behaviour of the application when sending the log files: the attachments were altered during the transport process, often making them unreadable.
- [IOS-738] - Fixed an internal timing issue related to the registration timeouts: PrivateGSM doubled the registration validity period thus ending often off-line unnoticed.
- [IOS-749] - In some occasions a missed call log reported the wrong time.
- [IOS-711] - No feedback if the user clicks on "refresh presence" button in Contacts Screen
