

# PSAM 1.4 Web console home page Description

In fig. 1 You can see the Web console **home page**. In the present paragraph we're going to examine and name each part of it

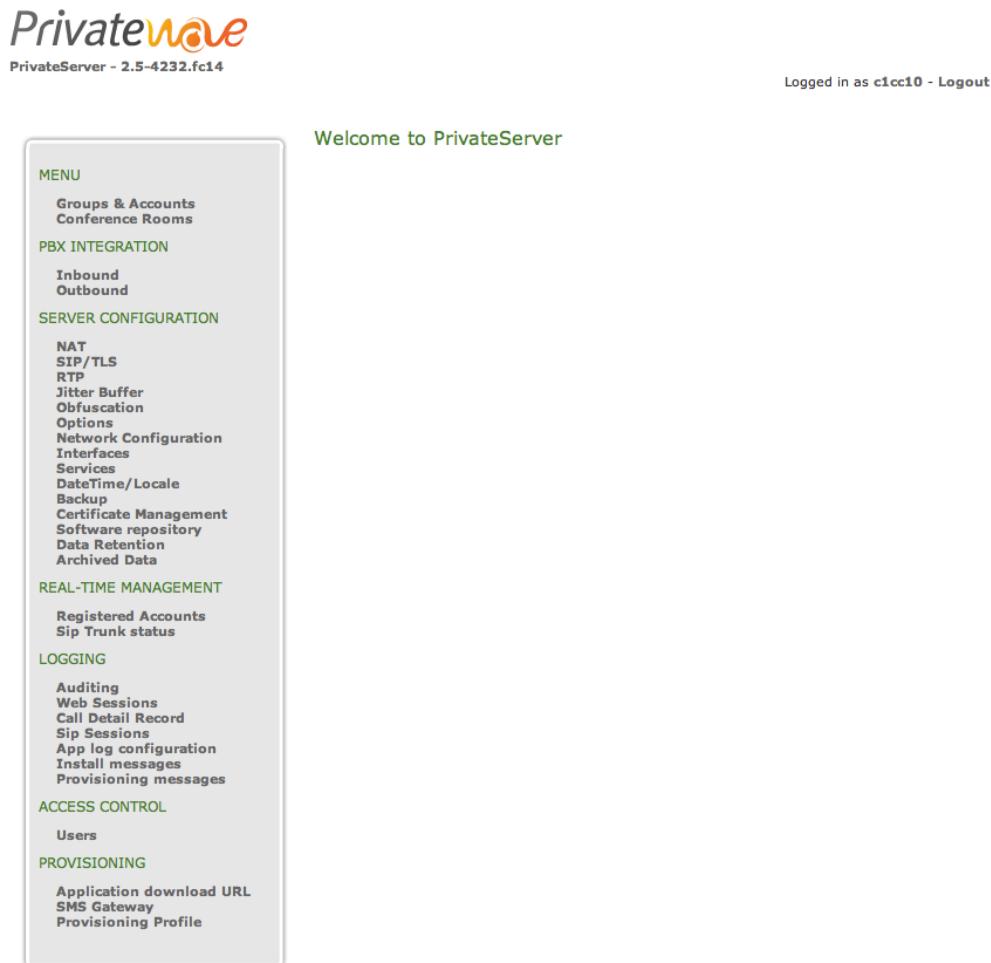

figure 1. The home page in its whole

## 1.4.1 Main elements

The home page is composed by 4 elements, listed below from the upper left to the right:

1. **Company Logo and PrivateServer version**
2. **Main Menu**: the big grey area on the left
3. **Page body**: the space in the page center, including the "Welcome to PrivateServer" message
4. **Web User Menu**: the upper right line saying: "Logged in as admin - Logout"

### 1.4.1.1 Company Logo and PrivateServer version

This is enough self-explaining. On the upper left side of the home page you can watch the company logo and just below the PrivateServer version, which in fig. 1 happens to be **2.0-2792.fc14**.

### 1.4.1.2 Main Menu

This component is very important and is going to become your lead into the Web console. It's divided into **sections**, which are the all capital, bigger font green lines:

- **MENU**

The main point for Secure Call service configuration. From here it's possible to create and configure Users and User's Groups. Also the Conference Rooms are managed by this section.

- **PBX INTEGRATION**

As the name implies, the integration from PrivateServer and another PBX (or an external SIP line) is to be done starting here.

- **SERVER CONFIGURATION**

This section is the one we are going to examine closer in the present document: here you will setup the service and the appliance.

- **REAL-TIME MANAGEMENT**

The "Registered Accounts" menu entry would show you the SIP users once you configured them both on client and server

- **LOGGING**

All the logs you need about the server behaviour

- **ACCESS CONTROL**

This is about configuring users, roles and access to the Web console itself

- **PROVISIONING**

Here you can configure all the options needed to perform the automatic activation included the SMS Gateway to use and the configuration to be delivered to the client by the definition of a Provisioning Profile

### 1.4.1.3 Page body

The page body is the place where each menu entry is going to show you its particular interface.

### 1.4.1.4 Web User Menu

From here you can **Logout** or access to the logged in user specific configurations and change them (ie: user's password).
