Release Notes

PrivateGSM - All editions - Version 11.3.3421

Fixed Bugs

- [PGBB-931] - Ringing time out was mistakenly set to 8 seconds instead of one minute. On the caller side this error produced a call drop after 8 seconds, on the callee side it led to a pointless continued ringing even with no call to answer to.
- [PGBB-935] - We encountered a connection issue on PrivateGSM: after a licence renewal the device would not automatically reconnect to its PrivateServer.
